

Table of Contents

Chapter 1	Introduction and Overview.....	1/17
1.0	Introduction	1/17
1.1	Background and Historical Review	1/17
1.2	Streamline Simulation: Overview	3/17
1.2.1	Some Basic Concepts	3/17
1.3	Streamline Simulation: An Outline of Major Steps	6/17
1.4	Streamline Simulation: Applications	11/17
1.5	Streamline vs. Finite Difference Simulation: Strengths and Weaknesses ...	13/17
1.6	Summary	15/17
1.7	Overview of Chapters	16/17
Chapter 2	Basic Governing Equations	1/31
2.0	Introduction	1/31
2.1	General Mass Conservation Equations	1/31
2.2	Initial and Boundary Conditions	6/31
2.3	Special Cases	8/31
2.3.1	Incompressible Flow and Ideal Mixing	8/31
2.3.2	The Black Oil Equations	11/31
2.4	Pressure Equation	13/31
2.4.1	Incompressible Flow	13/31
2.4.2	Black Oil Pressure Equation	14/31
2.5	Finite Difference Solution of the Pressure Equation	16/31
2.5.1	Discretization of the Spatial Derivatives	18/31
	<i>Approximation of the Interblock Quantities</i>	21/31
2.5.2	Temporal Discretization	23/31
2.5.3	Finite Difference Analog to the Pressure Equation	23/31
2.5.4	Treatment of Wells: The Source/Sink terms	25/31
	<i>Well Models</i>	26/31
2.5.5	Solution of the Pressure Equation: The IMPES method	27/31
2.5.6	Velocity Computations	29/31
2.5.7	Summary	30/31
Chapter 3	Streamlines, Streamtubes, Streamfunctions & Simulation	1/57
3.0	Introduction	1/57
3.1	Fundamental Definitions	1/57
3.2	Streamlines	5/57
3.2.1	Line Source and Sink Solutions	7/57
3.3	Streamfunctions and Streamtubes	10/57
3.3.1	Streamfunction in 2-D	11/57
3.3.2	Streamfunction and Complex Potential	13/57
3.3.3	Streamfunctions and Streamtubes in 3-D	18/57
3.4	Streamlines and Time of Flight	20/57
3.4.1	Time of Flight as a Spatial Coordinate	22/57

3.4.2	Relationship between Streamlines and Streamtubes	28/57
3.5	Numerical Formulation	30/57
3.5.1	The Streamfunction	30/57
3.5.2	Streamtube Displacement Calculations	36/57
	<i>Mobility Effects and Streamtube Flux Allocations</i>	39/57
	<i>Extension to 3-D</i>	42/57
3.5.3	The Streamline Approach	43/57
	<i>Streamline and Time of Flight Computations in 2-D and 3-D</i>	43/57
	<i>Transport Calculations along Streamlines</i>	49/57
	<i>Accounting for Transverse Flux</i>	51/57
3.6	Compressibility	52/57
3.7	Summary	55/57
Chapter 4 Applications: Field Studies and Case Histories		1/2
4.0	Introduction	1/2
4.1	Waterflood Field Tracer Interpretation	1/20
4.2	Maximizing Sweep Efficiency	1/3
4.3	Infill Targeting	1/4
4.4	Improved Waterflood Management	1/12
4.5	Semi-Analytic Waterflood Prediction	1/11
	4.5.1 Streamtube Dykstra-Parsons Analysis	3/11
	<i>Dimensionless Buckley-Leverett Solution</i>	10/11
	<i>Resistivity and Flow Rate</i>	10/11
4.6	Hybrid Methods: Sector Models and Streamtubes	1/9
4.7	Fractured Reservoir Flow Simulation	1/2
4.8	Run Time Considerations	1/7
4.9	Streamline-based History Matching	1/9
	4.9.1. Assisted History Matching	1/9
	4.9.2. Sensitivity-Based Assisted/Automatic History Matching.....	6/9
4.10	Flow Based Grid Design	1/6
4.11	Validation of Upscaling	1/4
4.12	Ranking and Uncertainty Assessment	1/7
4.13	Summary	
Chapter 5 Transport Along Streamlines		1/36
5.0	Introduction	1/36
5.1	Numerical Solution of Transport Equations: Eulerian vs. Lagrangian Approach	2/36
5.2	Eulerian Transport Calculations	2/36
	5.2.1 Spatial Discretization for 1-D Solution	2/36
	5.2.2 Numerical Solution of Tracer Transport	4/36
	5.2.3 Waterflood Saturation Calculations in 1-D	7/36
	5.2.4 Two-Phase Black-Oil Simulation with Compressibility	8/36
	5.2.5 Three-Phase Black-Oil Simulation with Compressibility	11/36
5.3	Lagrangian Transport Calculations	12/36
	5.3.1 Front tracking in Streamline Simulation	14/36

	<i>A Simple Illustration</i>	14/36
	<i>When Fronts Collide</i>	16/36
	5.3.2 Riemann Problems for Two and Three-Phase Flow	18/36
	<i>Scalar Conservation Laws and the Method of Characteristics</i>	18/36
	<i>Riemann Problem: Two-phase Flow</i>	20/36
	<i>Riemann Problem: Three-phase Flow</i>	29/36
5.4.	Front Tracking vs. Finite Difference	35/36
5.5	Summary	35/36
Chapter 6 Spatial Discretization and Material Balance		1/22
6.0	Introduction	1/22
6.1	Spatial Discretization: Streamlines vs. Finite Difference	1/22
6.2	Discretization Errors: Analysis and Convergence	2/22
6.3	Transverse Discretization: Errors and Convergence	4/22
	6.3.1 Transverse Discretization: Global Errors	4/22
	6.3.2 Transverse Discretization: Local Errors	7/22
6.4	Longitudinal Discretization: Errors and Convergence	9/22
	6.4.1 Saturation Averaging: A Conservative Approach	11/22
	6.4.2 Saturation Sampling: A Non-Conservative Approach	13/22
6.5.	Saturation Mappings in 3-D	15/22
	6.5.1 Mapping Streamlines to Grid Blocks	15/22
	6.5.2 Streamline to Streamline Mapping	17/22
	6.5.3 Saturation Mapping: Numerical examples	18/22
	6.5.4 Stagnant Regions and Stagnation Lines	19/22
6.6	Treatment of Wells	20/22
6.7	Summary	22/22
Chapter 7 Time Stepping and Transverse Fluxes		1/30
7.0	Introduction	1/30
7.1	Time Stepping in Streamline Simulation	1/30
7.2	Time Steps for Pressure Updates via Transverse Flux Correction	2/30
	7.2.1 Transverse Flux and Unsteady State Effects	2/30
	7.2.2 Transverse Flux Correction and Stability of the Solution	4/30
	7.2.3 Pressure Time Step Selection via a ‘Corrector’ CFL construction ...	7/30
7.3	Modeling Cross-Streamline Mechanisms Using Operator Splitting	11/30
	7.3.1 Operator Splitting: Background and Illustrative Examples	12/30
	<i>Dimensional Splitting</i>	13/30
	7.3.2 Solution to the 1-D Buckley-Leveret Problem by Operator Splitting	14/30
	<i>Buckley-Leveret with Gravity: Solution by Operator Splitting</i>	16/30
	<i>Buckley-Leveret with Capillarity: Solution by Operator Splitting</i>	18/30
	7.3.3 Modeling Gravity in the Streamline Simulation	22/30
	<i>Modeling Gravity in Streamline Simulation: Numerical Implementation</i> ...	24/30
	7.3.4 Modeling Capillarity During Streamline Simulation	26/30
7.4	Summary	30/30
Chapter 8 Streamline Tracing in Complex Cell Geometries		1/56

8.0	Introduction	1/56
8.1	Corner Point Cells	2/56
	8.1.1 Corner Point Cells and the Isoparametric Transformation	4/56
	8.1.2 Cordes & Kinzelbach's Extension to the Pollock Algorithm	8/56
	8.1.3 Reformulation of the Cordes & Kinzelbach Approach for Streamline Tracing	11/56
	<i>Streamline and Time of Flight Calculations in a 2-D wedge</i>	11/56
	<i>Jacobian Calculations and Implications for the Time of Flight</i>	14/56
	8.1.4 Impact of Grid Geometry on Displacement Calculations	17/56
	8.1.5 Implications of the Velocity Model	18/56
8.2	Faulted Cells	24/56
	8.2.1 Faulted Cells in 3D	28/56
8.3	Triangular and Tetrahedral Cells	36/56
	8.3.1 Control Volume Finite Element (CVFE)	37/56
	8.3.2 Cordes & Kinzelbach's Velocity Interpolation Within Control Volumes	40/56
	8.3.3 Streamline Tracing on Sub-Quadrilaterals	45/56
8.4	Cells with Wells	49/56
8.5	Summary	56/56

**Chapter 9 Advanced Topics: Fluid Flow in Fractured Reservoirs and
Compositional Simulation 1/33**

9.0	Introduction	1/33
9.1	Modeling Fluid Flow in Naturally Fractured Systems	1/33
9.2	Fluid Flow Equations in Naturally Fractured Systems	2/33
9.3	Streamline Modeling of Fractured Reservoirs	4/33
9.4	Matrix-Fracture Transfer Functions	5/33
9.5	Numerical Solution of the Saturation Equations	10/33
9.6	Streamline Simulation of Fractured Reservoirs: A Simple Illustration	14/33
9.7	Streamline-based Compositional Simulation	16/33
9.8	Compositional Pressure Equation	18/33
9.9	Finite Difference Analog to the Compositional Pressure Equation	22/33
9.10	Compositional Transport along Streamlines	23/33
9.11	Solution of the Compositional Transport Equations	25/33
	9.11.1 High Resolution Monotonic Schemes for the Numerical Solution of Conservation Equations	26/33
9.12	Phase Equilibrium Calculations	31/33
9.13	Summary	32/33

**Chapter 10 Streamline-Based History Matching and the Integration of
Production Data 1/46**

10.0	Introduction	1/46
10.1	History Matching and Inverse Modeling: Background	1/46
	10.1.1 The Forward Model	2/46
	10.1.2 Linear vs. Non-Linear Problems	2/46
	10.1.3 Construction of an Objective Function	4/46

	<i>The Deterministic Formulation</i>	4/46
	<i>The Bayesian Formulation</i>	5/46
	10.1.4 Minimization Schemes	7/46
	<i>Conditions for Local Minima</i>	7/46
	<i>The Gauss-Newton Method</i>	8/46
10.2	Streamline-based History Matching and Production Data Integration	12/46
	10.2.1 Assisted History Matching	14/46
	10.2.2 Assisted History Matching: An Illustration of the Procedure	14/46
	10.2.3 Automatic History Matching or Production Data Integration via Inverse Modeling	15/46
	<i>Production Data Integration: An Illustration of the Procedure</i>	16/46
	10.2.4 Examples of Streamline-Based History Matching	18/46
10.3	Streamline-based Production Data Integration: Mathematical Background	19/46
	10.3.1 Quantifying Data Misfit: Amplitude vs. Travel Time Inversion	19/46
	10.3.2 Streamline-based Sensitivity Computations	21/46
	<i>Sensitivity to Tracer Travel Time</i>	22/46
	<i>Sensitivity to Tracer Amplitude (Concentration) Response</i>	24/46
	10.3.3 Two Phase Flow: Sensitivity of Saturation Front Arrival Times	26/46
	10.3.4 Two Phase Flow: Sensitivity to Amplitude or Water-cut Response	27/46
	10.3.5 Two Phase Flow: Sensitivity Calculations for General Flow Geometry	28/46
	10.3.6 Three Phase Black Oil Case: Travel Time Sensitivities for Water-Cut and Gas-Oil Ratio	29/46
10.4	Transient Pressure Data and ‘Diffusive’ Time of Flight	30/46
	10.4.1 Asymptotic Solution to the Diffusivity Equation	31/46
	10.4.2 Streamline-based Drainage Volume Calculations	34/46
	10.4.3 Sensitivity Computations for diffusive time of flight	35/46
	10.4.4 Travel Time Inversion of Interference Tests	36/46
10.5	Uncertainty Assessment	39/46
	10.5.1 Uncertainty Quantification Using Streamline Models	40/46
	10.5.2 Uncertainty Quantification Using Streamline Models: An Illustration	43/46
10.6	Summary	44/46
